

EROSION CONTROL

12' SILTWORM

SILTWORM EROSION CONTROL

Is a ready-to-use sediment filtration device filled with a proprietary blend of 100% recycled, kiln-dried material. Approved by IL EPA and IL Urban Manual.

- No equipment, staking or trenching required
- Can be placed directly onto frozen ground or concrete
- Can be used in ditch check applications
- Can be used as inlet protection for storm drains or to reduce water flow in small ditches
- The ends of Siltworm can be angled in the direction of the slope to prevent storm water from escaping around the ends

INNOVATIVE. SUSTAINABLE. PROVEN

Eco-friendly & Reusable

Siltworm is filled with 100% biodegradable, recycled material and can be reusable. For disposal, simply cut the rolled-filter, drag the fill into final grade and dispose the netting.

High Quality

Our product is consistently manufactured with the same high quality materials under the same standards every time to deliver superior results.

Unique Fill

Our lightweight, proprietary blend of recycled fill is kiln dried. This process allows our fill to be weed free, seed free and disease free.
